

Science- Space/ Solar System

For Earth Science we will be studying Space/Solar System. The majority of our science will be R&D (research and demonstration of knowledge).

Please make sure you keep a calendar with due dates and investigate those areas that interest you the most! Space exploration and understanding of our Solar System is a HUGE topic, so there are many paths to take!

There are some key concepts that you need to take with you from 5th grade. Those include:

- ❖ Understanding of Earth's Rotation/Revolution
- ❖ Characteristics of the Sun
- ❖ Phases of the Moon
- ❖ Structure of our Solar System (Inner/Outer Planets)
- ❖ Planetary Study
- ❖ Space Travel (Historical, Present, Future)

in the Files section of the Teams platform will be documents containing several links for Space Research. Some hard copy activities will be available for pick up at the Middle School if interested.

Use your investigative skills and "show what you learn"! Find experiments that you can share with the rest of us and create presentations or projects to share information about our Solar System and Space.
